

Heroes Shield

HEROES
PAINT

Finish: Matt

Coating type: Water borne acrylic emulsion, matt finish for interior use.

Typical use: Heroes Shield is an interior anti-mould and anti-condensation paint for walls and ceilings. It is particularly suited to areas prone to condensation and recurring mould, helping painted surfaces retain warmth to reduce condensation and create conditions where mould is less able to grow.

Coverage rate: Approximately 6-7m² per litre on smooth surfaces, with increased consumption on rough or uneven surfaces.

Coats: Two coats

Preparation: Surfaces must be dry, clean and free from dust, dirt, grease or any other contaminants before application. The first coat of Heroes Shield can be diluted with up to 5% of water if required. Bare plaster must be properly dry before painting. Previously painted walls should be cleaned with sugar soap and lightly abraded. This is especially important if you are painting onto a 'shiny' surface such as Vinyl Silk or Eggshell. Any cracks or holes should be filled, sanded and then primed.

Application conditions: Substrate temperature must be at least 5°C and no more than 20°C.

Application method: Brush, roller, airless spray.

Application: Stir the paint thoroughly before application. Apply the first coat of Heroes Shield evenly across the prepared surface. Apply the paint at the recommended coverage rate. Avoid over applying the paint, as it may affect drying times and finish quality. 2 coats is sufficient. Avoid exposing the painted surface to water or heavy moisture for at least 12 hours after application to prevent discolouration or poor adhesion.

Drying time: Touch dry with in 30 minutes. Recoat time within 1-4 hours.

Shelf life: 12 months from date of manufacture in sealed container.

Storage: Store in a cool, dry place above freezing. Seal opened containers tightly and use the contents as soon as possible after opening.
